PRODUCT DESCRIPTION

The iDTRONIC embedded RFID reader M890 series is a high performance reader series. Thanks to its tiny size and single-face laying components layout, it allows for embedding in various applications and devices.

With its cutting edge microcontroller and latest HF transceiver technology, the reader series allows users to read and write almost any 13.56 MHz transponders. 5 different configurations are available which support the common RFID standards such as ISO 14443A/B (T=CL), ISO 14443-4, ISO 15693 and ISO 18092 / ECMA-340 (NFC), ISO 18000-3.

The embedded RFID reader M890 series features one external antenna port. iDTRONIC Professional RFID offers a wide choice of antennas suitable for any purpose. It achieves reading ranges of up to 10 cm (depending on type of transponder).

The Module M890 is available with TTL, USB VCP, USB HID, RS232/485 and PC/SC interface. In low power mode, the M890 consumes less than 1 mA.

iDTRONIC's hardware comes with a useful SDK for the development of controller, Linux or Windows based applications. Beside the documentation, command protocols and source codes, the SDK includes a Windows based demo application with full functionality over all supported HF RFID standards.

APPLICATION EXAMPLES

ACCESS CONTROL

Due to its small dimensions and its wide-range of interfaces, the M890 module can be installed in all kinds of existing systems, locks, locking systems or devices.

Applications for personal or hotel card identification require a system that can read DESFire or MIFARE cards. The embedded module M890 reads these cards reliably and securely. This increases security awareness against abusive and unauthorised access.

PAYMENT SYSTEMS

Payment systems are more and more to be found nowadays. In large company canteens, this type of payment processing is used for employees.

The M890 module can be optimally embedded in existing cashless readers oder devices.

The employee can identify himself by means of its DESFire chip card. With the PSAM function it is possible to pay by NFC directly.

This increases the effectiveness and efficiency of the procedures within the cash area of the canteen.
